

# Group Project

ToDoList

# Level 1

Create a Todolist where I can :

- Add a Todo
- Mark a Todo as done
- Edit a Todo
- Delete a Todo

# Level 2

- LocalStorage
- Object-oriented approach:
  - Think of the architecture
  - Code the classes with properties and methods accordingly

# Level 3 (optional)

Transform into React components for Todo / TodoList

- Choose either arrow function programming / Class Definitions
- All of the methods / properties should be set into the components

Basically this

**TOO DUMB  
TO DO THINGS  
NEED TODOLIST**

**HANDLE DOM  
ELEMENTS WITH  
JS FOR ENHANCED UX**

**INTRODUCE  
AN INFORMATION  
MODEL WITH OOI**

**DISCOVER THE  
BEAUTY OF  
COMPOSITION AND  
MODULARITY WITH REACT**
